Introduction and Company Overview

Creative Project is a small company located in Moie, Ancona. The company location has two main areas: the boss's office and the main office area. In the main office, on one side of the room there is a long desk with several computers, and on the other side there is a machine used to make advertising posters and a printer for printing flyers.

From the very first day, I was warmly welcomed by my boss. He was very enthusiastic about working with us, as it was his first time hosting students for PCTO

How the Company Works

Creative Project offers web design and online marketing services to local businesses and services of ads posters and flyers.

The company works by listing the requests from clients, designing personalized websites, and publishing them online also print flyers for events if its neccesary.

My Department and Role

Role

During my school work experience, I worked basically as an assistant, helping with both technical and creative tasks, and supporting my boss with various activities.

My Department and tasks

I didn't really have my own department, I had a desk where I could work with my computer and other equipment.

My main task was to develop a website for a future project for my boss.

Tasks and Professional

wordpress

Activities

My primary responsibilities included uploading and managing content on WordPress, which was the main platform used for site design.

I was also responsible for ensuring the website's overall functionality and user experience.

The site was connected to the FTP service via FileZilla and managed through phpMyAdmin for that i was also in charge of troubleshooting and resolving any issues that arose.

FileZilla FTP service

Meeting Deadlines and Task Management

Even though the final deadline for the website was set for the end of my school work experience, I had to complete some small tasks for my boss in either on the same day or within a few days.

This experience taught me the importance of organizing my work and meeting deadlines effectively, as I had to manage additional tasks alongside the main project.

Independence and Responsibility

At first, I needed my boss's help to understand how the software worked. However, day by day, as I practiced and learned more, I became more independent and confident in using it.

After a few days, I was able to work on my own and only asked my boss for help with specific issues on the website or to discuss ideas about its design.

Teamwork and Collaboration

During my school work experience, I didn't have the opportunity to work in a team.

However, this allowed me to become more independent and responsible for my own work.

I learned how to organize my time, make decisions on my own, and solve problems without relying too much on others.

Tools and Equipment Used

I mainly used WordPress to manage the website, FileZilla to upload files to the server, and phpMyAdmin to handle the database.

These were new tools for me, especially WordPress, as I had never used it before. Learning how they work gave me a better understanding of what happens behind every website. I also realized how much precision and attention to detail are required in this field.

Challenges And How I Overcame Them

At the beginning, I found it difficult to use the different software programs, like WordPress. However, by using them and practicing every day, I became more confident. My boss was very pleased and impressed with how quickly I learned to use the software and how fast I adapted to the work.

What I Learned About Myself

I discovered that I am persistent, even when facing new and challenging tasks.

I also realized that I enjoy both creative and technical work, especially when I can see the final result online.

This experience helped me gain more confidence in my own abilities.

I was also pleasantly surprised by myself for how flexible I was and by how quickly I adapted to the job and learned to use new programs that I had never used before. My boss was impressed as well by how quickly I managed to learn and work independently.

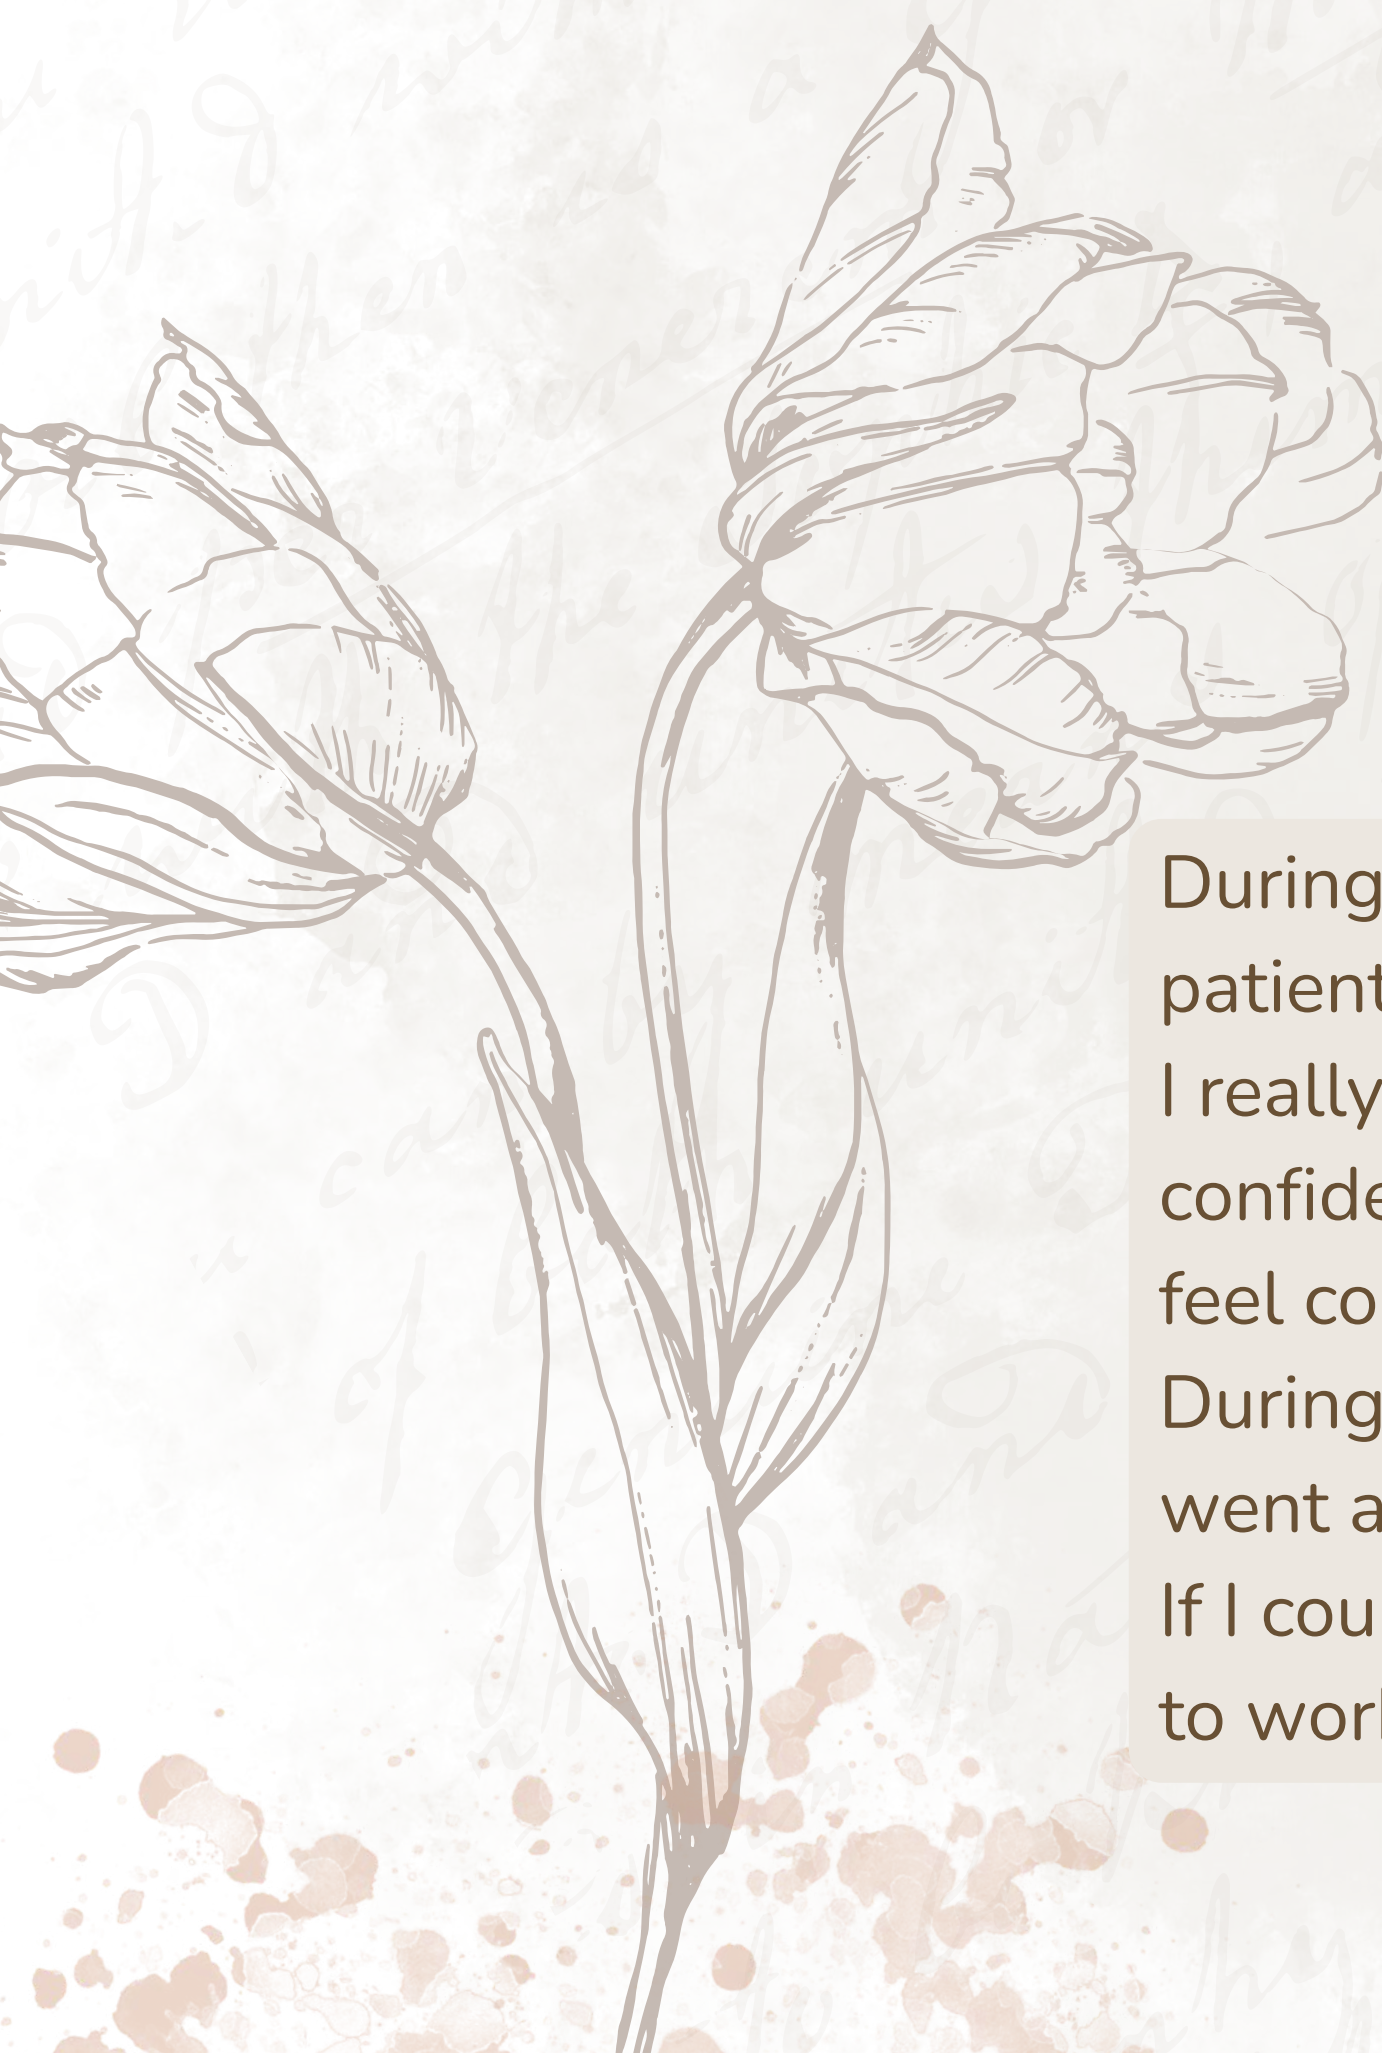

Expectations and Future Goals

My expectations were exceeded. I had the chance to experience real web design work and understand what this job truly involves. Thanks to this experience, I decided that I want to become a web designer in the future and continue studying in the IT and digital field.

I am still in contact with the owner, as we promised to keep in touch and talk again after I finish my final year of high school. I am still deciding whether or not to go to university.

Support and Final Thoughts

During my experience, I was lucky to have a company boss who was always patient and ready to help me whenever I had doubts or technical problems. I really appreciated his constant support because it made me feel more confident and motivated to improve. He was also very friendly and made me feel comfortable from the very first day of my school work experience. During this period, I was also really surprised by how well the experience went and by how much I discovered about myself things I didn't know before. If I could suggest one thing to improve, it would be to have more opportunities to work with other people besides my boss.
